Employee Data Import using Import Sets and Transform Maps:

The spreadsheet is used to import employee information into ServiceNow using Import Sets and Transform Maps. It contains employee details such as Employee ID, Name, Email, Department, and Location.

The uploaded spreadsheet data is first stored in an Import Set Table for temporary processing and validation.

A Transform Map is then used to map these fields to the corresponding fields in the target Employee table.

The system uses Employee ID as the unique identifier to identify existing employees and update their records, while new employees are inserted as new records.
