Project Design Phase-II
Data Flow Diagram & User Stories

Date	02/10/026
Team ID	SWTID-2026-5414
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

The Data Flow Diagram below shows how employee data moves through ServiceNow during the import. The HR Admin uploads a spreadsheet containing Employee ID, Name, Email, Department, and Location. The data is first stored in an Import Set Table for temporary processing and validation. A Transform Map then maps these fields to the corresponding fields in the target Employee table. Employee ID is used as the unique identifier: if it already exists, the employee record is updated; otherwise, a new record is inserted.

User Stories

User stories for importing employee data into ServiceNow using Import Sets and Transform Maps:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
HR Administrator	Data Upload	USN-1	As an HR administrator, I can upload a spreadsheet containing Employee ID, Name, Email, Department, and Location so that employee data can be imported into ServiceNow.	The spreadsheet is uploaded and its rows are loaded successfully	High	Sprint-1
HR Administrator	Data Upload	USN-2	As an HR administrator, I can have the uploaded data stored in an Import Set Table so that it can be temporarily processed and validated.	All spreadsheet rows appear in the Import Set Table	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Administrator	Field Mapping	USN-3	As a ServiceNow administrator, I can create a Transform Map to map the Import Set Table fields to the corresponding fields in the Employee table.	Employee ID, Name, Email, Department, and Location map to the correct Employee table fields	High	Sprint-1
ServiceNow Administrator	Field Mapping	USN-4	As a ServiceNow administrator, I can use Employee ID as the unique identifier (coalesce field) so that existing employees are identified correctly.	Records with a matching Employee ID are recognised as existing employees	High	Sprint-1
HR Administrator	Data Transformation	USN-5	As an HR administrator, I can have existing employee records updated when the Employee ID already exists so that employee details stay current.	Existing records are updated with the new values and no duplicate records are created	High	Sprint-2
HR Administrator	Data Transformation	USN-6	As an HR administrator, I can have new employees inserted as new records so that newly hired employees are available in ServiceNow.	A new record is created in the Employee table for each new Employee ID	High	Sprint-2
ServiceNow Administrator	Import Monitoring	USN-7	As a ServiceNow administrator, I can review the import results so that I can verify that the data was imported correctly.	The import summary shows the number of inserted, updated, and failed records	Medium	Sprint-2
Employee	Employee Records	USN-8	As an employee, I can view my up-to-date details such as Department and Location in ServiceNow.	My Department, Location, and Email match the latest imported data	Medium	Sprint-3
