Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	02/10/2026
Team ID	SWTID-2026-5414
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Upload	Upload spreadsheet containing Employee ID, Name, Email, Department, and Location Load the uploaded file into ServiceNow using an Import Set
FR-2	Import Set Staging	Store the uploaded data in an Import Set Table Temporary processing and validation of the imported data
FR-3	Data Transformation	Use a Transform Map to map the Import Set Table fields to the Employee table fields Use Employee ID as the unique identifier (coalesce field)
FR-4	Employee Record Management	Update the existing employee record when the Employee ID already exists Insert a new record when the Employee ID does not exist
FR-5	Import Monitoring	View import results (inserted, updated, and failed records) Identify and correct errors found during validation

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description

NFR-1	**Usability**	Admins can upload the spreadsheet and run the import through the standard ServiceNow interface with minimal steps, and clear field names and error messages.
NFR-2	**Security**	Only authorised roles (such as HR and ServiceNow administrators) can import and transform employee data, and employee information is protected through ServiceNow access controls.
NFR-3	**Reliability**	Data is validated in the Import Set Table before reaching the Employee table, so failed rows do not corrupt existing records, and Employee ID prevents duplicate records.
NFR-4	**Performance**	The Import Set and Transform Map process the employee records in bulk and complete the import within an acceptable time.
NFR-5	**Availability**	The import can be run whenever the ServiceNow instance is available, and can be re-run if an import fails.
NFR-6	**Scalability**	The solution can handle a growing number of employee records, and new fields can be added to the Transform Map when required.
